GAS FIRES

2019

MADE IN BRITAIN

Welcome to Verine

Beautiful fires, designed to allure

At Verine we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of premium gas fires to complement all tastes and lifestyles.

Choose a Verine fire and all your expectations will be fulfilled. Elegant, sophisticated and designed to perfection. Verine fires are all this and more. Crafted to not only captivate and beguile, they are built to the highest standards, are energy efficient and perform brilliantly.

"I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards.

As a result all Verine fires carry a 15 year guarantee to reflect my belief in their quality and durability, and our experienced Verine retailers are hand-picked to give you the very best advice and service.

This brochure has been designed to make the purchase of your new Verine fire as simple as possible. I hope you will find it both informative and inspiring."

VERINE 15 YEAR GUARANTEE

Our 15 year guarantee†

From design stage to manufacture every effort is taken to produce an appliance that will provide exceptional and continued standards of safety and performance. Every fire is assessed and approved by leading independent organisations and rigorously checked by our Quality Control department before leaving our state-of-the-art facility.

Therefore, we are confident you'll be enjoying the warmth of a Verine fire for many years to come. That's why we are able to provide a remarkable 15 year Guarantee† with every gas fire, giving you reassurance and peace of mind. We will guarantee your fire for 15 years* against manufacturing and material defects, including parts and labour, subject to proof of annual service and replacement of the oxy-pilot assembly.

*Terms and conditions apply.

Ecodesign Compliant

This logo signifies that the product is fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

BFM Europe
BRITISH FIRE MANUFACTURERS

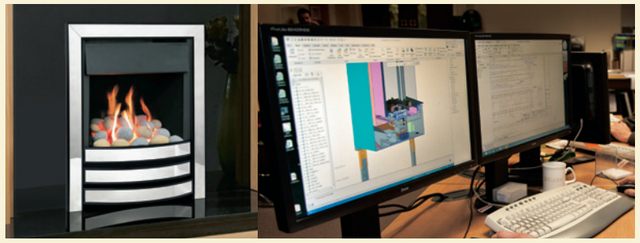
BRITISH MADE QUALITY

Verine is crafted by BFM Europe, the fastest growing domestic fire producer in the country with an unequalled reputation for quality and service. Every Verine branded gas fire is developed and manufactured in Britain at our purpose built, state-of-the-art facility in Stoke-on-Trent.

VERINE

FIRES TO INSPIRE

Expect optimum quality & performance from your fire



Verine fires are built to last in our state-of-the-art UK manufacturing facility where our quality standards meet the stringent demands of ISO 9001/2015. That's why we are able to offer an impressive 15 year Guarantee on all gas fires.

Every fire in the range features a Flame Supervision Device (FSD) which detects the presence of a flame, and in the absence of that flame, prevents uncontrolled release of gas to the burner. For maximum safety each conventional flue model also includes an Oxygen Depletion Sensor (ODS) which shuts off the gas supply to the main burner in the unlikely event of a fault.

We recommend that all gas appliances be serviced by a Gas Safe Register engineer to ensure continued safe operation and optimum performance throughout the lifetime of the product. In order to encourage and promote this good practice, an annual service, including replacement of the oxy-pilot, is a condition of our 15 year Guarantee.

Expect the highest level of after sales service & expert advice

For over 45 years Verine have sold quality products and given quality service, elegance and innovation to the fireplace industry. Specially appointed retailers have been established nationally to display our products, install them and give expert advice to help you choose the correct appliance to suit your needs.

We want you to get the maximum benefit from this expertise and therefore recommend you avoid purchasing any Verine product over the internet, especially from companies not located in your area who are unable to offer the highest levels of aftersales service.

bsi.

Product Testing & Certification

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI).

The BSI is an independent organisation. They are not owned by the government, industry or shareholders, which means that they can be totally objective with regards testing and certification. This gives their assessments more authority than those of an organization that has a vested interest in promoting its members.

They have some of the most experienced and knowledgeable staff in the world and are recognised internationally for their technical expertise, quality services and in-depth knowledge of gas and electrical product testing and certification.

The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their testing and certification staff ensures our products are rigorously tested with the utmost integrity.

Before you begin

There is a Verine fire for all tastes, from traditional to contemporary chic. However, before you make your final selection, please take time to consider the following.

RADIANT OR CONVECTOR?

A radiant fire emanates heat from the combustion chamber only, which is why Verine radiant fires incorporate a glowing back panel to maximise heat output. A convector fire has the added benefit of a heat exchanger attached to the back of the fire. This draws cold air in and sends it back out into the room as hot air, maximising heat output whilst keeping your fuel bills down.

CHIMNEY OR FLUE?

Your choice of fire will be dictated by the type of chimney or flue you have. If you're not sure, then take a look at your roof and cross-reference it with the simple guide below. It is also worth noting that a slimline fire will fit virtually any chimney or flue, whereas a full-depth often requires a traditional chimney or rebate on the fire surround.

Brick Chimney
A conventional brick chimney is easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

Pre-Fabricated Flue
This is an interlocking metal flue tube system easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue
Built from concrete or clay blocks, pre-cast flues provide a rectangular section flue. They can be identified by a ridge vent or metal flue tube and terminal on the roof. All fires featuring this icon are suitable for pre-cast flues conforming to BS EN 1858.

NO CHIMNEY OR FLUE?

Some properties have no chimney or flue, in which case a balanced flue is required.

Balanced Flue fires vent directly outside through a co-axial pipe (one pipe within a larger pipe). The outer pipe draws air in from the outside and the inner pipe expels combustion gases. An electricity supply is not required for these products. Please see installation manuals for further details about installation possibilities.

GAS SUPPLY

Your gas supply will either be Natural Gas or LPG, depending on the area in which you live.

Natural Gas
The most common gas supply

LPG
Alternative for houses with no Natural Gas supply

CONTROLS

Gas is wonderfully controllable, but which type of control suits you best? The discretion of manual ignition, concealed behind the removable ash pan… the convenience of slide control… or the luxury and style of remote control?

Manual Control
Simple and discreet. The control system is located behind the fires fret or trim. Once the fire is lit rotate the control knob to adjust the flame height and heat output.

Slide Control
A convenient control system which is located on the top right-hand side of the fire. Push and hold the lever down to ignite and move it up and down to adjust the flame height and heat output.

Easy Flame Control (EFC) - Discreet, easy access buttons are used to ignite the fire and adjust heat and flame height.

Remote Control
The remote control handset is used to light the fire as well as to adjust the flame height and heat output.

Remote Control with Thermostat
The remote control handset can be used to light the fire as well as to adjust the flame height and heat output. In addition, the handset contains the extra benefit of a thermostatic control to regulate room temperature and a programmable timer that can be pre-programmed to ensure your room will be warm whenever you wish.

FIRE BACK PANELS

Some Verine fires offer you a choice of fire back panels – simply choose the one that suits your room from the options available.

highefficiency

Get up to 93.5% energy efficiency

from a Verine gas fire

Verine has always had a reputation as a manufacturer of some of the most efficient fires on the market. Now we are setting new industry standards with the Verine high efficiency range: exceptional heat output combined with lower running costs compared to standard gas fires.

Verine's R&D team has invested in developing the technology to meet the key objective of producing gas fires that save energy and as a result, help to keep costs down.

Inspired design. Advanced technology

Our high efficiency products are available in a range of glass fronted or open fronted fires and include Conventional and Balanced Flue models.

Orbis HE ..... Pages 14-15

Conventional Flue fires

Glass Fronted Fires

Our range of high efficiency conventional flue glass fronted fires have an energy efficiency of up to 86%. They have a glass panel across the front of the fire which radiates the heat generated from the fuel bed directly into the room. The glass panel concentrates the radiant heat so that more heat is forced into the room and less is lost through the chimney. Combined with convected heat which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air though the gap above the canopy, making these the most efficient conventional flue fires available.

Alpena BF ..... Pages 28-29

Quasar Plus ..... Pages 20-21

Open Fronted Fires

Our high efficiency conventional flue open fronted fires can reach an energy efficiency of up to 68.3%. These fires provide the look and feel of a real open fire providing both radiant and convected heat. Radiant heat is emitted from the fuel bed and the convected heat is generated by cool air drawn into the base of the fire which passes through a heat exchanger and is then emitted as warm air though the gap above the canopy.

Balanced Flue fires

Glass Fronted Fires

Our range of high efficiency balanced flue fires have an energy efficiency of up to 93.5%. Designed for those who want all the benefits of a gas fire but don't have a built in chimney or flue in their home, a balanced flue fire comes with its own flue terminal which is vented directly through an outside wall. They are glass fronted, completely room sealed appliances and work by drawing and venting external air via a pair of co-axial tubes into the fire for combustion purposes.

IMPORTANT

WARNING BFM Europe Limited is a Gas Safe Registered company. We recommend that all of our fires are installed by Gas Safe Register engineers in accordance with our instructions.

DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase.

Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information.

Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to fire model and flue types.

We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure.

We recommend that all our fires are used in conjunction with central heating and not as a primary source of heat.

In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.
