

CAPITAL STOVES

LEADING SUPPLIER OF LUXURY STOVES

WOOD • MULTI-FUEL • GAS • ELECTRIC • BIOETHANOL • ACCESSORIES

ECO2022 Stoves

DEFRA, the Department of the Environment, Food and Rural Affairs, included wood burning stoves in their 2019 Clean Air Strategy. The strategy aims to reduce the amount of harmful emissions that affect air quality by ensuring stove manufacturers improve the performance and efficiency of their stoves.

In January 2022 the law was amended to state that all solid fuel appliances sold must be Eco Design Compliant. To be Eco Design Compliant, stoves must show significantly improved emissions when compared to older stoves or open fires.

All Capital Eco 2022 stoves have been tested in an independently approved test house and have achieved the requirements of Eco Design Regulations. Registration has also been made with HETAS (a national organisation working for consumer safety and the wider public interest in safe, efficient and environmentally responsible use of biomass and other solid fuels) and DEFRA.

A requirement of Eco Design Regulations is that all gas and multi fuel appliances must display an energy rating. We are delighted to confirm all Capital Eco 2022 Ready Stoves have A or A+ ratings.

At Capital, we launched our first range of fully compliant Eco 2022 Ready Stoves in 2018. We were proud to do this knowing we were one of the first companies to have stoves that were already achieving the necessary standards.

Our multi-fuel and wood burning stoves are all Eco 2022 compliant and Clear Skies certified in addition to being registered with HETAS and DEFRA. These stoves not only reduce the level of harmful air pollutants, but they also run more efficiently using less fuel, so will cost less to operate.

Improving our carbon footprint is a key part of our business philosophy.

Willow

Bioethanol Stove

Introducing the new Willow stove - a beautifully crafted bioethanol stove designed to bring effortless warmth and contemporary style into your home. Combining the timeless charm of a traditional stove with the simplicity of clean-burning bioethanol fuel, the Willow creates a real, flickering flame without the need for a chimney. Its minimalist black finish and large glass door make it a striking addition to both modern and classic interiors, offering a cosy focal point with a sustainable touch.

The Willow bioethanol stove is a flueless, real-flame decorative appliance that burns renewable liquid fuel derived from plant-based sources like corn or sugarcane. Its defining characteristic is ventless operation, meaning it does not require a chimney, flue, or gas connection, allowing for near-total flexibility in placement.

Fuel Type: Liquid Bioethanol

Heat Output: 2-3kW

Burner Capacity: 1 Litre

Control: Manual

Fuel Bed: Ceramic Log Set

Construction: Steel & Cast Iron

A wood-burning stove is the central focus, set within a brick fireplace. Above the mantel is a large, abstract painting of a figure. To the left, a dark leather armchair is partially visible. To the right, a tall, ribbed ceramic vase stands on the floor. A textured rug lies in front of the fireplace. The room has light-colored walls and a grey carpet. Two circular callouts in the top right corner highlight features: 'lifetime warranty' and 'outside air kit available'. An 'A+' energy rating badge is in the bottom right corner.

Stove Chambers

Our stove chambers are a stylish and convenient way to elevate your fireplace opening. Stove chambers are suitable to be used with a wide variety of appliances and fuels, making them hugely versatile. Whether you want to create a cosy country cottage vibe or are striving for a sleek and contemporary home, there is a huge range of designs to choose from.

Available in a wide range of styles and finishes, chambers are supplied in a convenient three piece set that will fit most standard fireplace openings. If you need something a bit smaller or a little larger, we offer a made to measure service too. Speak to your Capital Fireplaces retailer for more details.

Made to Measure

Selected styles of chambers are available as made to measure on a POA basis. Please contact us for a quote.

Clearances

Minimum clearance distances apply, visit our website or refer to the installation instructions for more information.

All dimensions are provided in millimetres (mm). Thickness of chambers varies per design, ranging from approximately 25mm to 40mm. Please allow + / - 10mm tolerance due to varying thicknesses of materials and the manufacturing process. Please check individual chamber sizes with your retailer.

Please note that colours may vary to those pictured.

Chamber Trim Kits

A quick and easy way to finish off your fireplace chamber.

Equipped with magnetic corner pieces, these chamber trim kits simplify the trimming process while ensuring a secure fit. Available in Stainless Steel or Black, these trim kits effortlessly enhance the aesthetic appeal of any fireplace, offering practicality and ease of use.

1100mm (x3) x 40mm Face x 35mm Return

Atlas Tiled Hearth & Back Panel Set

Elevate your stove with this tiled back and hearth set

The Atlas set offers a sophisticated blend of function and flair, designed to enhance any interior while complementing a wide range of stove installations. Available in a handpicked selection of premium tile finishes, each set is framed with a sleek, high-gloss trim that adds a contemporary edge to your fireplace.

Once installed, due to the integrated air vents, it allows for circulation and sufficient air for cooling, ensuring safe operation, making it as practical as it is visually striking. Whether undertaking a renovation or installing a new appliance, the Atlas set delivers a seamless experience with the following key benefits:

- **DIY Friendly** – Designed for ease of installation, enabling a professional finish
- **Clean & Hassle-Free** – No mortar, no mess, and no disruption to your home environment

- **Quick & Reliable** – A secure two-screw fixing system ensures stability and precision with minimal effort
- **Cost Effective** – Achieve a premium aesthetic while significantly reducing installation costs
- **Safe & Compliant** – The dynamics of the integrated air vents allow for cooling when the appliance is in operation
- **Durable & Robust** – Constructed from high-quality materials to withstand heat and everyday wear
- **Wide Style Range** – Available in ten distinctive styles to suit both traditional and contemporary décor
- **Low Maintenance** – Easy to clean and maintain
- **DIY Friendly** – Designed for ease of installation and complete with a handy fixing template tool, enabling a professional finish without specialist tools or expertise

Geocast Beams

Our non-combustible Geocast® Beams have been developed from a natural, inorganic material that is extremely durable and non-combustible. Being non-toxic and heat resistant, Geocast® Beams offer more flexibility for installation requirements and added peace of mind.

The Geocast® Beam range has been designed and moulded to a high-definition specification, creating a truly authentic and realistic effect. Real wooden beams were used in the design process to ensure that we could create a likeness that was harmonious in colour, shape and texture to real wood.

Although minimum clearance distances to the stove still apply, Geocast® Beams allow installation distances to be much closer than real wood. Please refer to instructions on our website for further detail at www.capitalfireplaces.co.uk/technical

DELUXE GEOCAST® BEAM BRACKET

Compatible with any of our 48 inch and 54 inch length beams, this innovative new bracket allows you to install any Geocast® Beam on an uneven wall. Supplied with fixing brackets, bolts and a measuring guide, the Deluxe Geocast® beam bracket makes installation easy and efficient.

3 polished edges as standard unless otherwise stated. Flat nominal 20mm height.

Boxed & Lipped nominal 50mm height.

Technical Information

STOVE VENTILATION

Houses built before 2008: Houses built before 2008 are likely to have an air permeability greater than 5m³/h.m² so stoves with an output below 5kW do not require an air vent. However, stoves with outputs above 5kW require a permanently open vent. So for each kW of output above 5kW allow 550mm² of air supply. Extensive renovation of an older property carried out after 2008 may reduce the air permeability to less than 5m³, in which case the guidance for houses built after 2008 should be followed. Chimneys with flue stabilisers are subject to different ventilation requirements.

Houses built after 2008: Houses built after 2008 with an air permeability of less than 5m³/h.m² require the air supply to be calculated for the whole of the stove's rated output. This means that the installation of stoves with an output of less than 5kW must now have a permanently open air vent. Allow 550mm² of air supply for each kilowatt of rated output. Seek advice from your retailer and building regulator.

THE BURNING IN PERIOD

All Capital Stoves are manufactured from cast iron or steel therefore it is vital that appliances undergo a period of "burning in", this involves small fires initially, gradually increasing in size with each firing. When purchasing a stove, please remember to adhere to the following important points; always read user instructions prior to initially using the stove, burn only anthracite or kiln dried wood as this will give you up to twice the heat output and help reduce tar build up in the flue, never burn household waste and do not overload the stove at any one time.

CLEANBURN STOVES

To burn fuel in a smoke controlled area the law determines that either the fuel should be smokeless or the appliance should be approved by DEFRA (Department of the Environment, Food and Rural Affairs) normally these appliances are approved by DEFRA for burning kiln dried wood. Some of our DEFRA approved products are capable of burning both kiln dried wood and anthracite in smoke control areas, a dual fuel use that most cleanburn products cannot offer.

All Capital Stoves are CE approved to EN13240.

Please note many of the flue pipes shown in this brochure have been sprayed with one of Capital Fireplaces high temperature paints to match the finish of the stove.

CHOOSING THE RIGHT FUEL

Please note choosing the right fuel for your stove or fireplace is vital to ensure a lifetime of enjoyable, trouble-free use. To burn fuel in a smoke controlled area, the law determines the fuel should be smokeless or the appliance should be approved by DEFRA. Therefore we would only recommend burning kiln dried wood or anthracite, any other fuel or objects such as household waste will produce harmful gasses subsequently reducing the performance of your appliance. To ensure you are sourcing and burning the correct fuels, visit www.readytoburn.org for more information.

Capital Fireplaces Ltd reserve the right to change specification or de-list products at any time. Due to the nature of the materials and appliances used within this brochure, actual finishes and colours may vary slightly. Flames shown may also vary depending on gas type, fuel quality and the performance of the flue or chimney, images in this brochure are for illustration purposes only.

Misplaced your Capital Stove manual?

No problem, digital copies can be found on our website at www.capitalfireplaces.co.uk/technical-information

Lifetime Warranty

CAPITAL STOVE LIFETIME WARRANTY

All Capital multi fuel and wood burning stoves are covered by a lifetime warranty, unless otherwise stated, for added peace of mind (valid for original purchases only) from date of sale. This warranty excludes the following naturally wearing consumable items; door glass, firebricks, rope seals, baffle and grate (including riddling mechanism).

This warranty also excludes the “warm white enamel” finish on any of our stoves. Enamel finish products are inherently susceptible to crazing and chipping in the normal wear and tear of the product life.

In addition, the following criteria must be met:

- ✓ Sight of the data plate that should have been fitted by the approved installer.
- ✓ Proof of installation by HETAS or other approved body, or letter from Building Control confirming that the installation was installed in accordance with the Building Regulations.
- ✓ Proof of purchase from one of our approved suppliers.
- ✓ Proof of annual sweeping of chimney, at which time an inspection as to the condition of both the chimney and the stove should be carried out to allow for necessary maintenance to be performed.
- ✓ Only dry/seasoned wood with moisture content of less than 20% or Anthracite (multi-fuel stoves) has been used.

Capital Fireplaces Ltd will accept no responsibility for installations which have been carried out that are not in accordance to the Building Regulations or if the conditions stated in the manufacturer's instructions are not adhered to. Warranty applies to parts only.

IMPORTANT POINTS

Always read user instructions prior to initially using the stove.

We recommend burning kiln dried wood, this will give you up to twice the heat output of freshly felled timber and helps reduce tar build up in the flue.

Do not overload the stove at any one time.

Never burn household rubbish as this can give off harmful gasses and will reduce the performance of the stove.

CAPITAL GAS STOVES WARRANTY

We offer a 2 Year warranty on our Gas Stoves. Year 1 includes parts and labour, year 2 includes parts only. Subject to conditions, for further details please visit www.capitalfireplaces.co.uk

CAPITAL ELECTRIC STOVES WARRANTY

We offer a 2 Year warranty on our Electric Stoves. Year 1 includes parts and labour, year 2 includes parts only. For further details, or to apply for our extended Platinum Warranty Plan, please visit www.solutionfires.co.uk/warranty
